

TASK OUTPUT SCREENSHOT

AGENT ROUTING:

 **Customer Input:** What are the pricing plans available for your software?

 **[TASK 3 - INTENT CLASSIFICATION]:** Category -> SALES | Critical Flag: False

 **Customer Input:** I forgot my account password.

 **[TASK 3 - INTENT CLASSIFICATION]:** Category -> ACCOUNT | Critical Flag: False

 **Customer Input:** My application crashes whenever I upload a file.

 **[TASK 3 - INTENT CLASSIFICATION]:** Category -> TECHNICAL | Critical Flag: False

 **Customer Input:** I need a refund for my annual subscription.

 **[TASK 3 - INTENT CLASSIFICATION]:** Category -> BILLING | Critical Flag: True

The Agent Router analyzes the user's query and determines which specialized workflow (agent) should handle the request. This enables different types of requests (sales, technical support, billing, account management, etc.) to follow different execution paths.

HUMAN-IN-THE-LOOP:

 **[TASK 8 - HUMAN INTERVENTION COMPLIANCE ACTION REQUIRED]** 

Escalation Target: *I need a refund for my annual subscription.*

Authorize processing approval? (yes/no): yes

Certain operations, such as refunds, cancellations, or sensitive account changes, require human approval before execution. The graph pauses until approval is received.

RAG RETRIEVAL:

 **Customer Input:** What are the pricing plans available for your software?

 **[TASK 3 - INTENT CLASSIFICATION]:** Category -> SALES | Critical Flag: False

 **[TASK 6 - RAG CONTEXT RETRIEVED]:** [Pricing Guide]: ABC Technologies offers standard SaaS cloud subscription struct...

 **Customer Input:** I forgot my account password.

 **[TASK 3 - INTENT CLASSIFICATION]:** Category -> ACCOUNT | Critical Flag: False

 **[TASK 6 - RAG CONTEXT RETRIEVED]:** [FAQ / Corporate Policy]: Password reset operations must utilize registered admi.

 **Customer Input:** My application crashes whenever I upload a file.

 **[TASK 3 - INTENT CLASSIFICATION]:** Category -> TECHNICAL | Critical Flag: False

 **[TASK 6 - RAG CONTEXT RETRIEVED]:** [Technical Manual]: File execution stack loops or upload system fault crashes a

 **Customer Input:** I need a refund for my annual subscription.

 **[TASK 3 - INTENT CLASSIFICATION]:** Category -> BILLING | Critical Flag: True

 **[TASK 6 - RAG CONTEXT RETRIEVED]:** [Company Policy Document]: Refund requests are processed inside a standard 14-da

Once the request is routed, the appropriate knowledge is retrieved from the company's document database (vector database). This ensures responses are grounded in enterprise documents rather than relying only on the language model's general knowledge.

MEMORY STORAGE & RECALL:

```
📄 Customer Input: What was my previous support issue?
🔍 [TASK 3 - INTENT CLASSIFICATION]: Intercepted Memory Query -> MEMORY_RECALL
🔍 [TASK 7 - SQLITE MEMORY RECALL ENGINE EXECUTED]

TASK 10 OUTPUT - FINAL RESPONSE (MEMORY_RECALL)
Based on the conversation log provided, your previous issues and questions were:

1. **Pricing Plans Inquiry**: You asked about the pricing plans available for the software.
2. **Password Reset Request**: You forgot your account password and needed assistance with resetting it.
3. **Application Crash Issue**: Your application crashed whenever you uploaded a file, and you requested help troubleshooting this issue.
4. **Refund Request**: You needed to request a refund for your annual subscription.

These were the main points of interaction in the conversation so far.
```

LangGraph stores important conversation history so it can answer future questions using previous interactions. This allows the assistant to maintain context across multiple turns.

FINAL RESPONSE GENERATION:

```
TASK 10 OUTPUT - FINAL RESPONSE (SALES)
Certainly! Here is a polished version of your corporate message:

ABC Technologies offers three main pricing plans for their SaaS cloud subscription:

1. **Starter Plan**: At $29 per month, this plan provides fundamental access to ABC Technologies' software.
2. **Professional Plan**: This plan includes full core capabilities and costs $79 per month.
3. **Enterprise Custom Options**: These are tailored options that can be customized according to specific enterprise needs, with pricing varying based on the customization requirements.
```

After routing, retrieval, optional human approval, and memory access, the language model generates the final response using all gathered information.
